WHOLESALE TRADE PRICES

Kelsey's Hardy American Plants

The largest stock in the world of the true Native Rhododendron catawbiense, R. maximum, Kalmia latifolia, and indigenous Azaleas. Nearly 100 acres of native plants

GROWN AT

Highlands Nursery, Kawana, N. C. (3,800 feet elevation) and Salem. Mass.

HARLAN P. KELSEY, Prop., Beacon Bldg., BOSTON, MASS.

Cable Address, KELMONT-BOSTON.

Always address Boston Office.

Terms. etc.

Terms are eash or satisfactory reference from unknown parties. Accounts due 1st of each month, unless by special arrangement.

Shipments usually direct from Highlands Nursery, from Pineola, N. C., freight station. Present freight rate to New York, Boston and Philadelphia points, 961/2 cents per 100 pounds. Special express rates connecting with Norfolk steamers. Rates from our Rhododendron fields in Pennsylvania and from Nursery in Salem, Mass., on request.

Packing charged at cost only; our export shipments reach the most remote countries in perfect condition.

Send foreign remittances by Postal Money Order, drawn on Boston, Mass., postoffice or by New York or Boston Exchange. An American dollar equals 4 shillings, 4 marks or 5 francs.

> Claims must be made on receipt of goods. All shipments travel at consignee's risk.

> Shipping begins in August, when we send out large Rhododendrons, Kalmias and other Evergreens, and Bulbs and Herbaceous Plants; general stock going out in October and November, and in spring, from about March 1 to May Give shipping instructions, unless you wish to leave

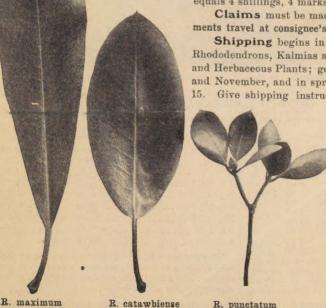

it to us. We use our best judgment, but assume no risk.

A Certificate of Inspection is sent out with every ship-

Strictly hardy stock only is offered in this catalog, unless specially noted.

We publish a beautifully illustrated descriptive catalog and a unique Rhododendron booklet. Please write for

We make low prices on any list of nursery stock desired, and are glad to estimate.

R. maximum

Photograph showing comparative sizes and shapes of our nest three species of American Rhododendrons. All are perfectly hardy in latitude of Quebec. One-half to one-third natural size.

The True RHODODENDRON CATAWBIENSE

Carolina Rhododendron

is with great pleasure we offer for the first time in America or abroad a complete stock of the rare Rhododendron catawhiense (true species), in sizes from small plants to large clumps. Do not confuse this with the common so-called "catawhiense seedlings" imported from Europe, which is in reality a half-hardy, poor-flowered hybrid with little catawhiense blood in it. The true species grows only in the highest Southern Alleghany mountains, and is the finest of all Rhododendrons, considering its far superior to that of the better known **Rhododendron maximum**.

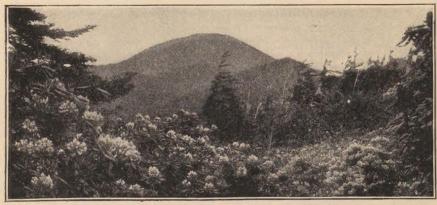

For massing and producing a broad-leaved evergreen effect, there is no plant equal to it in

the latitude of the northern United States, where strictly hardy plants must necessarily be used. Unlike R. maximum, it is a free bloomer, the large trusses being a bright red-purple color, in marked contrast to the muddy purple of the common half-hardy hybrid noted above. All plants offered below are heavy clumps. Packing is done in boxes, or the larger sizes in crates, and is charged at cost. These clumps often have 30 to 50 stems, and are bushy to the ground. We offer both collected and transplanted clumps.

For use as a finished edging for Rhododendron maximum and Kalmia plantations, the

value of R. catawbiense cannot be over-estimated.

We have magnificent fields for collecting this grand Rhododendron, with reasonable freight rates. Parks, cemeteries and nurserymen should write us for special prices in car lots.

Rhododendron catawbiense in the Carolina mountains, at 4,000 feet elevation

PRICES OF RHODODENDRON CATAWBIENSE

Most clumps over 1 foot are heavily budded

We offer some large clumps with fine bushy tops, thin-foliaged at bottom, for use in center of large masses, 3 to 6 feet high, at 75 cts. to \$10 each, both nursery-grown and collected.

Do not compare the many-stemmed clumps offered above with the single-stemmed "bushy" half-hardy Rhododendrons offered by importers. There is no comparison

and Kalmia latifolia MOUNTAIN LAUREL

PERFECTLY HARDY IN THE LATITUDE OF QUEBEC

broad-leaved, evergreen effects is so well established as to scarcely need comment. There is no other possible way to obtain the results to be had by the use of these magnificent hardy evergreens. We sell both collected and nursery-grown clumps in any quantity. Our facilities and long experience are approached by none, and the quality of stock we handle cannot be duplicated. We have over 100,000 Rhododendrons and Kalmias growing in our Nurseries, fine bushy

plants with balls. Our nursery grown stock is in Kawana and Salem, while we collect car-load lots from special sources in the Pennsylvania and Carolina Mountains. Prices per car-load of Rhododendron maximum vary with size and grade.

For mass effects, planting the large clumps in the backgrounds, we recommend using a mixed grade, say 2½ to 8 feet high, at \$90.00 per car f.o.b. Extra selection at \$110.00 to \$140.00 per car, according to size and grade.

KALMIA LATIFOLIA by car-load \$100.00 to \$160.00 f. o. b., according to size and grade. Freight rate from our Pennsylvania

grade. Freight rate from our remissivanta fields to Boston, New York, Philadelphia, Rhododendron maximum Buffalo and similar points is from \$20.00 to \$40.00 per car. Number of plants to the car varies from forty or fifty to several hundred, according to size and grade.

It is always best to have us make a special estimate where large quantities are desired, and it is cheaper and more satisfactory to buy by the plant, and have cars packed to the utmost limit.

PRICES BY THE PLANT

RHODODENDRON MAXIMUM

All are bushy and with balls, and the larger clumps usually budded and all well furnished, diameter corresponding well to height.

How to Make a Successful Rhododendron Bed

Large Rhododendrons growing at Highlands Nursery. From photograph.

(Small plants are grown under lath shade.)

By this we mean a place for the proper reception of Rhododendrons, Azaleas, Kalmias, Leucothoes, Andromedas, Galax and other ericaceous plants that require special treatment to make them thrive permanently. They are all surface feeders, requiring cool, moist loam to draw nourishment from.

WHERE POSSIBLE, choose a NORTHERN EXPOSURE with shade (it is often a winter sun on the frozen leaves that kills Rhododendrons), and good drainage. Where moisture can be had, excavate 2 feet, filling in with equal parts of good leaf-mold or other decayed vegetable matter and rich loam, with a tenth sharp sand, and plenty of well-rotted stable manure. In limestone soil, excavate 3 feet deep and 5 feet from the border of the planting, and water with rain- or cistern water if possible.

Keep the bed heavily mulched, using forest leaves, spent tan, old hay, etc., letting this covering decay from year to year, to give a continual supply of the mold and humus essential to successful growth.

In extensive plantations, use clumps preferably, choosing the most favorable location, with proper soil and drainage, giving the right care after planting as before indicated.

The essentials for successful Rhododendron culture are given above, and, if carried out, they are grown as easily and surely as Roses or Hydrangeas.

We are always glad to give advice on this subject.

COLLECTED PLANTS

This is a Catalog of nursery-grown plants, unless specially noted, but many can be supplied in strong, collected stock when desired.

Our facilities are unapproached elsewhere for collecting the best stock at a low cost, and an experience of 20 years and well-trained collectors enable us to assure buyers that orders for "collected" plants will receive the same attention and care as though we intended planting the stock ourselves. We do not recommend the extensive use of collected stock and cannot guarantee it in any instance, excepting large evergreen clumps, such as Rhododendrons, etc. Rhododendrons, etc.

This grand new Hemlock, in	troduc	ed by	us, po	08-

nd Evergreen Trees, continued

This grand new Hemlock, introduced by us, possesses a distinct pyramidal growth, and attains a height of 40 to 50 feet. Its dense, dark foliage and graceful habit are approached only by some of the finer Japanese Hemlocks, which it somewhat resembles. Some fine specimens are now to be seen in the Arnold Arboretum, Boston, being the first plants of this Hemlock ever sent out, and supplied by us to Prof. C. S. Sargent, Director, in 1884.

NATIVE AZALEAS

(Strictly Hardy)

The American Azaleas are among the choicest of all ornamentals, exotic or native, and were but rarely seen in cultivation before being disseminated by Highlands Nursery. Large masses of the "Great Flame-colored Azalea," A. lutea, when seen in flower, present the most gorgeous effects, the shadings varying from deep crimson to a bright sulphur yellow, and its complete hardiness is unquestionable. The foliage of A. arborescens is the finest of all the Azaleas, remaining a clear, shiny green throughout the summer, a characteristic not usual with this family. The large, white, sweet-scented flowers appear the last of all the Azaleas, and the numerous pink-tipped stamens protruding give a most beautiful effect. A. vaseyi is one of the finest introductions of late years; the flowers, appearing before the foliage in April in the greatest profusion, are white to deep pink; attains a height of 12 to 15 feet. A. nudillora (deep pink) and A. viscosa (white) are pretty, dwarfer varieties for the under shrubbery and for mass planting.

HARDY STOCK ONLY!

The location of HIGHLANDS NURSERY, at the summit of the Blue Ridge, in western North Carolina, 3,800 feet among the clouds, and under the shadow of the great Grandfather Mountain (the highest peak in the Blue Ridge range), insures long, cool summers and cold winters, producing a perfectly hardy stock—a most important point with northern planters. Ten to 15 degrees below is not unusual, and occasionally the thermometer registers 20 degrees or more below zero.

LEUCOTHOË CATESBÆI

(Catesby's Leucothoe)

Few, if any, evergreen shrubs of the broad-leaved sort have the grace and elegance of this one. The thick, shining leaves are evenly disposed on long, recurved branches, along which the dense racemes of white bell-shaped flowers hang. As an undershrub, or for banks of streams, or for finishing the borders of rhododendron and other evergreen planting, it is without a rival. The "sprays" make beautiful winter decorations indoors, turning a rich bronze in fall or winter.

Hardy Native Vines and Climbers

Many plants here offered are of special merit for ground covering, and where needed in large quantities will be supplied at very low prices. Parthenocissus (Ampelopsis) engelmanni, Lonicera halliana, L. flava, Polygonum cilinode, Celastrus scandens, Rubus hispidus and Vitis species are particularly recommended. In soils adapted to its growth (peaty or loamy, and preferably moist), Galax aphylla makes a hardy evergreen understrub covering of lasting beauty, being a rich green in summer and coloring vivid bronze tints in autumn and winter, an effect which must be seen to be appreciated.

Hardy Ground - Covering Plants

GALAX APHYLLA

(Galax, or Coltsfoot)

A low ground-covering evergreen with heart-shaped crenate-toothed leaves of striking beauty. The white flowers are borne on a scape 12 to 18 inches high. The thick leaves turn brilliant shades of bronze, red and crimson in autumn, remaining so through the winter. We introduced the leaf to the florists' trade for decorating purposes, and they are now used by millions. A remarkable ground-covering plant, particularly for use in the rhododendron bed.

LILIUM SUPERBUM (Turk's Cap Lily)

No description will do justice to this magnificent American Lily. A clump of them is literally a blaze of scarlet and gold. For years we have made the growing of this Lily a specialty, and send out thousands of bulbs every season. Our stock this season is very fine, and we are offering it at a low price for the benefit of large planters and those wishing to catalog it. Of special use for planting in rhododendron beds.

A small corner of Highlands Nursery in the high Carolina mountains

A New and Remarkable Carolina Mountain Plant

STENANTHIUM ROBUSTUM

(Mountain Feather Fleece)

A SINGLE PANICLE AND MASS OF STENANTHIUM FROM PHOTOS TAKEN AT HIGHLANDS NURSERY

This remarkable hardy perennial is, without doubt, one of our best new introductions, and may be classed with the showiest of all herbaceous plants. As the buds begin to unfold in early August they are quite upright and of a light green tinge, gradually becoming whiter until at last they burst forth into a veritable snowbank of drooping, fleecy bloom of purest white, the panicles often 2 to 3 feet long In September, the flowers, as they ripen, turn to shades of pink and purple, It is a vigorous perennial, attaining a height of from 5 to 8 feet when well established, and is absolutely hardy throughout the United States and Canada.

The Mountain Feather Fleece is of easy cultivation, and if given plenty of food, makes a wonderful show equalled by few plants of any description. Give rich soil and ordinary border location.

The illustration gives some idea of the wonderful effect of Stenanthium when in full bloom, but inadequately conveys the beauty of the delicate, feathered, drooping, flowers. When known it will be planted by thousands.

SURPLUS OFFER OF NURSERY STOCK

Highlands Nursery

Hardy American Plants

HARLAN P. KELSEY, PROPRIETOR

6 Beacon Street, Boston, Mass.

SHIPMENTS WILL BE MADE FROM PINEOLA, NORTH CAROLINA, FREIGHT STATION

The below nursery-grown stock is offered at prices attached, for immediate orders in not less than one hundred of a kind, unless smaller quantity is offered. As these prices are made to dispose of a surplus, mostly of trees which I do not intend to carry in large sizes in the future, the prices are made conditional on immediate acceptance, although stock may be engaged for shipment next spring. Boxing charged at cost. Prices subject to stock being sold.
